

AVG® Online Backup

We all know how important it is to keep information backed up but with time under constant pressure, few remember to do so regularly.

AVG® Online Backup helps protect your data with a secure, automated backup process that works seamlessly, providing a range of options including how often the backup takes place and what data to capture.

How does this benefit you?

✓ **Backup anywhere**

As employees become increasingly mobile, it's crucial that backups still take place when off the corporate network. AVG® Online Backup is designed to be a remote service so, as long as the device is connected to the Internet, their data backup will take place.

✓ **Protect what's important**

Not all data needs securing. Editable policies enable you to choose which folders to back up and deliver further granularity through defining types of file to capture or ignore (e.g. MP3 files) as well as restricting by the file size.

✓ **Schedule to suit your needs**

Choose how often you want your data to be backed and when. Customizable Backup Schedules let you choose regularity of backups ranging from daily to monthly, while also allowing you to select a time of day or night that is most appropriate for your business and user needs.

✓ **Data protection for peace of mind**

When information leaves your business network, you want to ensure it is as safe as possible. AVG® Online Backup uses three-tier encryption to protect your data both 'in-transit' and 'at rest'. In addition, Data Centers are ISO9001 and ISO27001 certified so you can be confident your data won't be compromised.

✓ **Free 30-day trial**

Try AVG® Online Backup free for 30 days to ensure it's the right service for you.

✓ **Pay-as-you-go service**

Data storage is billed in arrears and based on actual usage, so you don't have to worry about estimating requirements in advance of risk paying for unused storage space.

When protecting your data is this simple...Why complicate?
